

# PREVIEWS

<b>Constraining risk</b>	<i>Estimating pot odds (the chance of winning needed to break even), whether from poker or drilling risk, can be calculated using expected dry hole costs and the predicted value of a discovery. A comparison with the estimated chance of success may help to make appropriate decisions. . . . .</i>	525
<b>Differentiating channel systems</b>	<i>Quantitative seismic geomorphology techniques are applied to the middle Frio, south Texas, to quantify the morphometric parameters necessary for predictive geologic models of fluvial reservoirs. This study seeks to quantify the geometric variability of the middle Frio channel belts. . . . .</i>	537
<b>A rare, recent analog</b>	<i>This study investigates the evolution of the Pliocene-Quaternary Malita intrashelf basin, Bonaparte Shelf, northwest Australia. The Bonaparte Basin is an excellent location for studying depositional geometries and controls on stratigraphic architecture of intrashelf basin carbonates in a low-latitude, wide-shelf setting. . . . .</i>	565
<b>Carbonate porosity and deep burial</b>	<i>Fluid migration along deep fault zones affected porosity in the Lower Saxony Basin. Hydrothermal origin of ascending fluids rich in iron and CO<sub>2</sub> increased porosity along fractures. Carbonate dissolution in the calcitic host rock increased porosity and permeability near the fracture walls. . . . .</i>	597
<b>Timing hydrocarbons and trap formation</b>	<i>Analysis of the burial and thermal history of an Ordovician field in the Illizi Basin, Algeria, using thermal maturity, apatite fission-track, fluid inclusion microthermometry, sonic velocity, and biostratigraphic data provides independent, and consistent constraints on the evolution of the structure. . . . .</i>	623
<b>Depositional environment and dynamics</b>	<i>Vertical and lateral facies distribution of the Boquillas Formation (outcrop analog of the Eagle Ford, west Texas) is controlled by sediment productivity under the influence of bottom currents below storm-wave base. Grainstone bodies in the middle member of the Boquillas are sedimentary. . . . .</i>	657
<b>Single or multiple ramp kinetics?</b>	<i>Waples believes that the data in Peters et al. (2015) contradict their conclusion that multirun kinetics give highly confident or unique A factors and corresponding activation energy distributions. Peters responds that source-rock kinetics derived by the standard multirun methods are still superior. . . . .</i>	683
